# JRA2 TPC DAQ

Status and plans

Ulf Mjörnmark

This talk

## Based on the ALICE TPC readout:

Front End Card (FEC), to be modified for new amplifier

Readout Control Unit (RCU), modified for clock/trigger/25Mhz sample clock

Source Interface Unit (SIU)

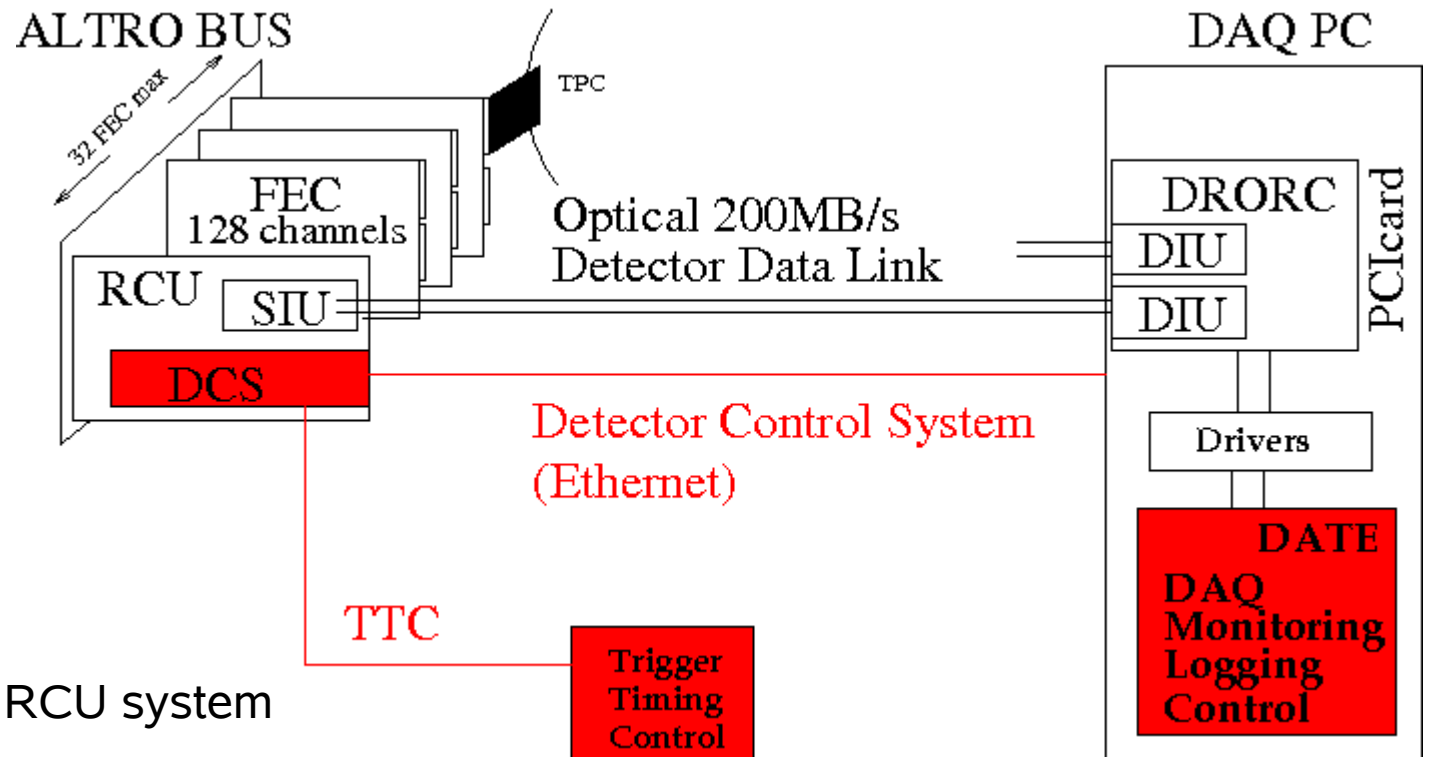

Read Out Receiver Card (DRORC), Destination Interface Unit (DIU)

ALICE API/drivers

Build our own DAQ on top

Distributor Box (DBOX) to distribute clock/trigger/busy

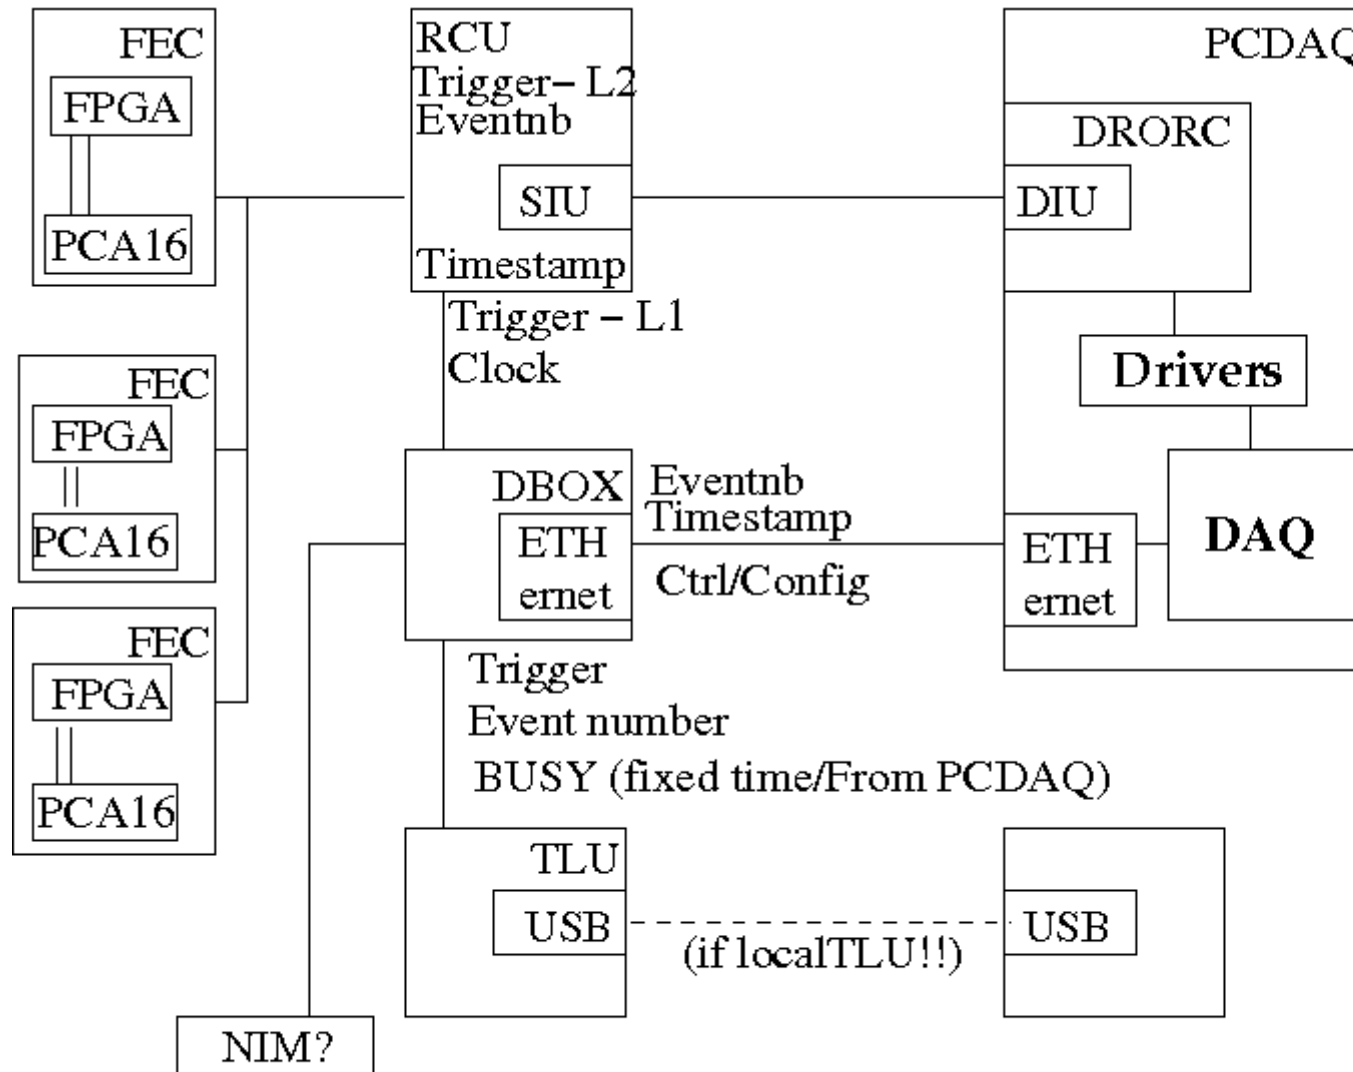

Interface to common DAQ

EUDET: 1 RCU

10000 ch: 4 RCU

possible to distribute 1 RCU system

## Hardware overview

FrontEndCard  
 ReadoutControlUnit  
 ReadOutReceiverCard  
 DistributorBOX

Local h/w trigger

Local triggers: PMT, DBOX generator, local TLU, Ethernet  
 External triggers: TLU

# ALICE TPC Front End Card

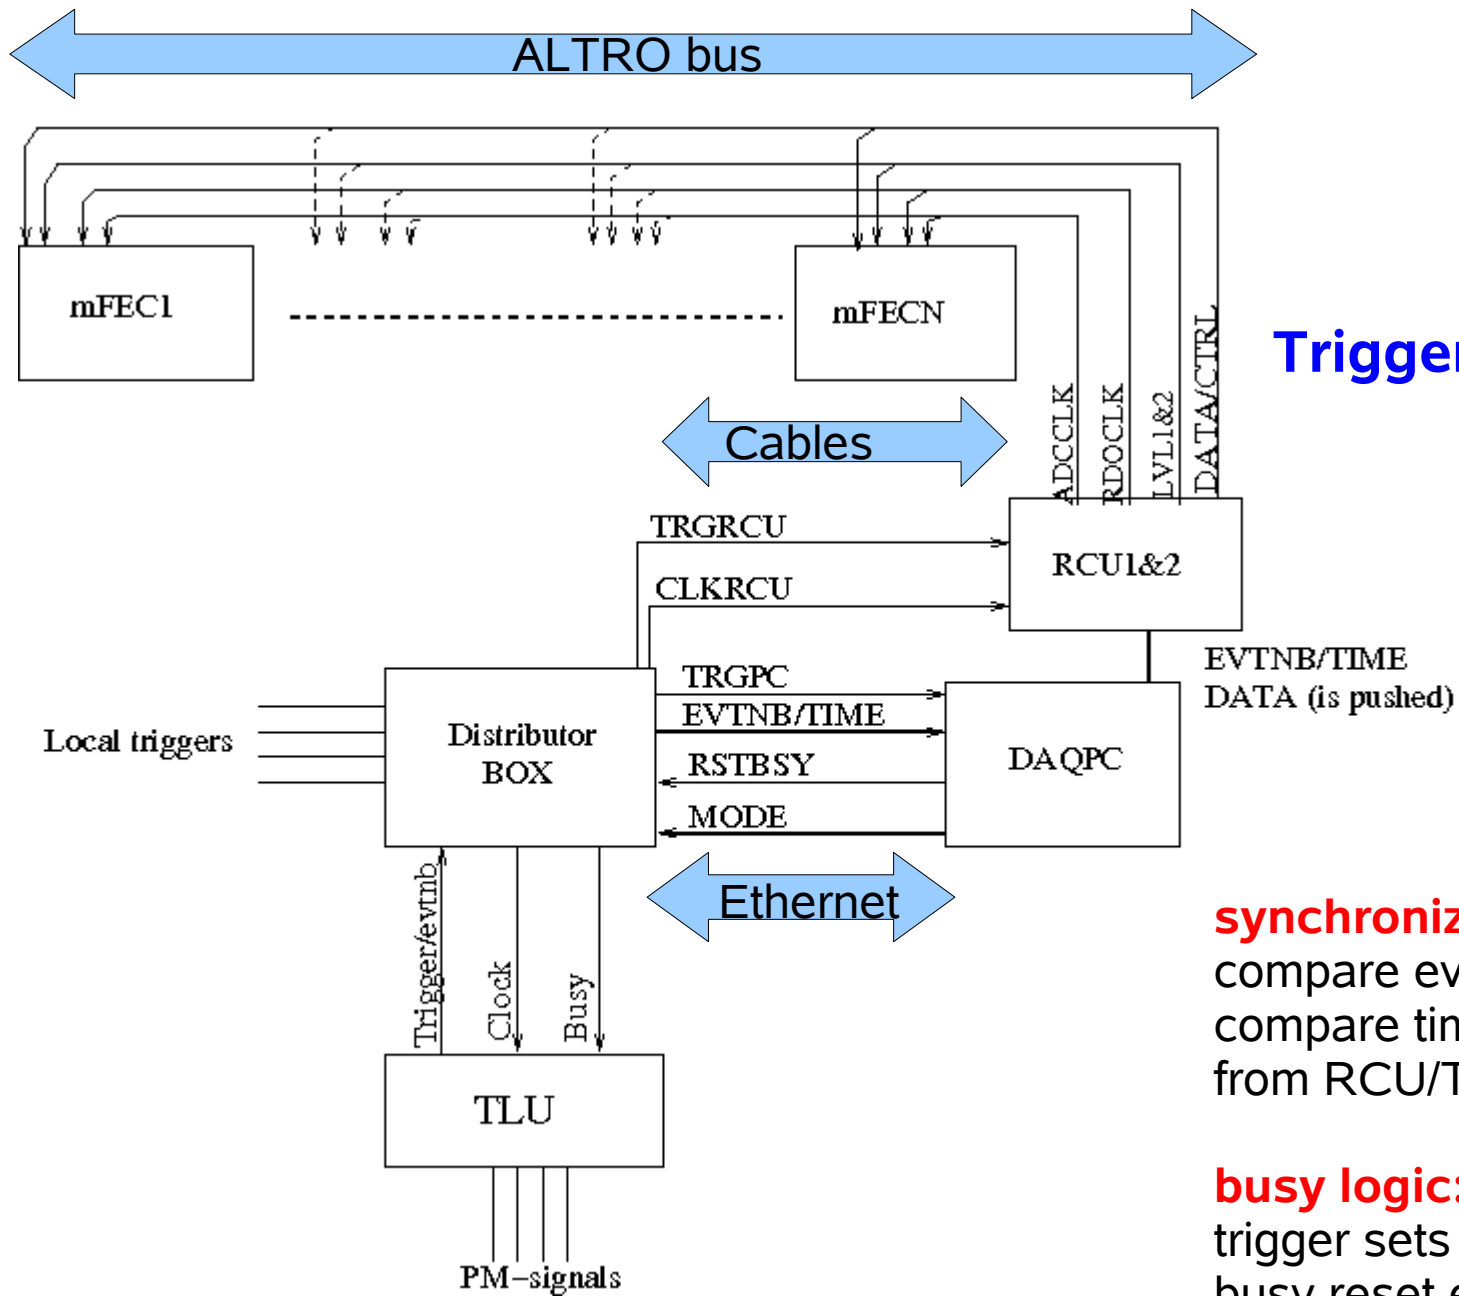

PASA to be replaced with Programmable Charge Amplifier (PCA16)

ALTRO 16 ch ADC

19 cm

17 cm

## Trigger/Busy system

**synchronization:**  
 compare event number  
 compare time stamps  
 from RCU/TLU/DAQPC

**busy logic:**  
 trigger sets system busy  
 busy reset either:  
 1) DAQPC via ethernet  
 2) Fixed time in distributor box

**Power**

**TEST SETUP**

**Busy/Control  
( Parallel port )**

**DRORC**

**Trigger**

**RCU**

**Backplane**

**ALICE FEC**

**Pulser**

**Optical fiber**

**Raw data (double pulse)**

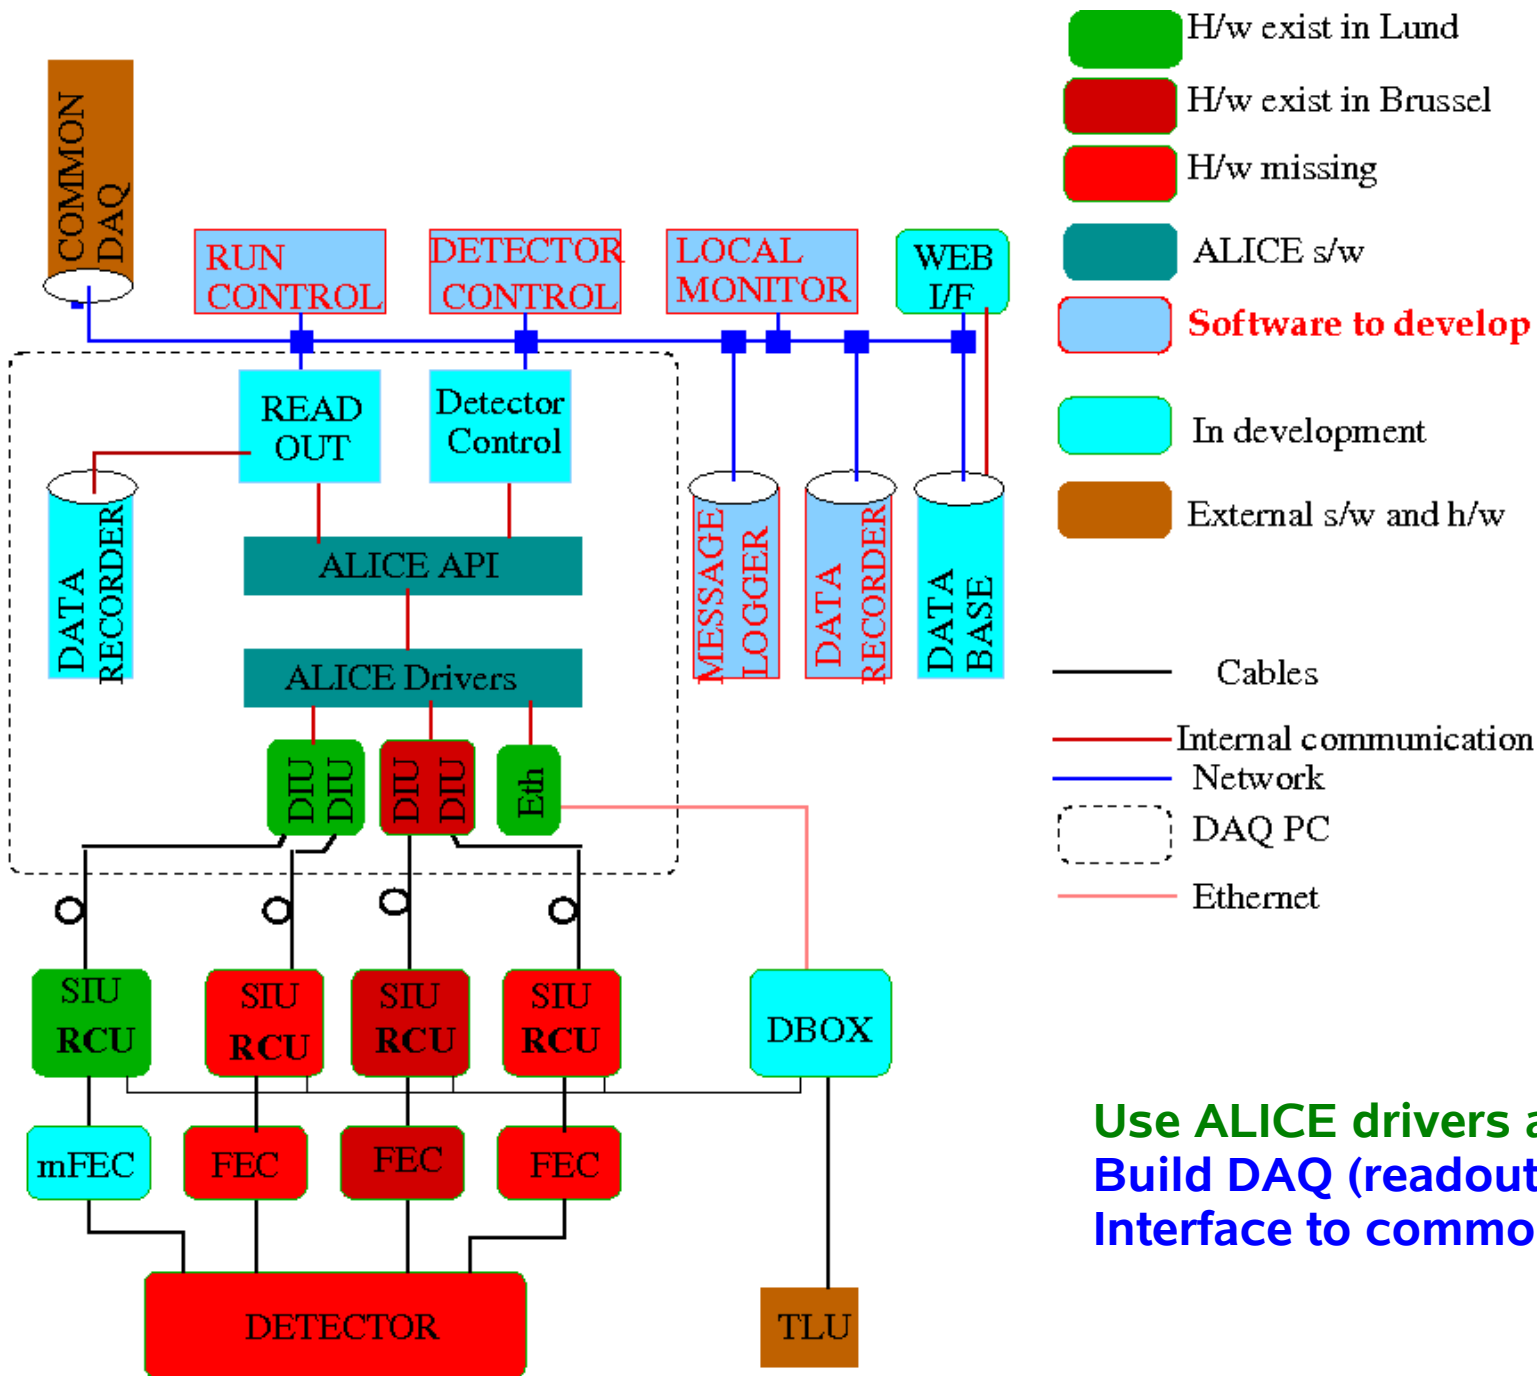

**Pedestal subtracted  
Zero suppressed  
(Multiple pulses)**

**D  
A  
T  
A  
  
f  
r  
o  
m  
  
T  
E  
S  
T  
  
S  
E  
T  
  
U  
P**

**TIME = 100ns per bin (10 MHz sample clock)  
410 samples**

**Use ALICE drivers and APIs as is**  
**Build DAQ (readout/control) on top**  
**Interface to common DAQ**

## RAW EVENT FORMAT (32-bit words)

Total event length (exclusive, added by software)
Header length (exclusive, added by software)
Block identifier = BLOCK_EVENT (=2) (added by software)
Software event number (incremented by software for each read event)
Hardware trigger number (read from distributor box)
Time stamp (read from distributor box)
RCU block length (exclusive, added by software)
RCU identifier (added by software)
RCU HEADER – 8 words
ALTRO DATA – N40 = # of 40 bit words = (N40*5)/4 32 bit words = N32
...
...
RCU block length (exclusive, added by software)
RCU identifier (added by software)
RCU HEADER – 8 words
ALTRO HW DATA – N40 40 bit words = (N40*5)/4 32 bit words = N32

## RCU HEADER

BLOCK LENGTH [31..0] = FFFFFFFF			
FORMAT [31..24] = 1	L1 Type [23..16]	[15:129 = 0	EVT ID1 [11..0] = 0
[31..24] = 0	EVT ID2 [23..0] = N => 0 ??		
[31..24] = 0	Participating subdetectors [23..0] = 0		
[31..28] = 0	Status/Error [27..12]	Bunch [11..0]	
Trigger classes low [31..0] = 0			
ROI [31..28]	[27..18] = 0	Trigger classes high [17..0] = 0	
Region Of Interest (ROI) [31..0]			

## ALTRO HW 40 bit word DATA example for one channel:

40    30    20    10

S05	S04	S03	S02 (sample)
S10	007 (length)	T06 (time stamp)	S06
005	T12	S12	S11

....

S91	S90	S89	S88 (sample)
2AA	007 (length)	T92 (time stamp)	S92
2AAA (14 -bits)	# 10 bit words (10 bits)	A (4 bits)	12-bit hardware address

# SUMMARY

Based on ALICE TPC readout  
New preamplifier on front end card  
Using ALICE drivers  
Build simple DAQ on top  
Distributor box to distribute trigger/clock/busy

## *Simple test setup working*

### **Work in progress on:**

front end cards  
distributor box  
readout of hardware  
readout configuration

### **Missing:**

run control  
monitoring  
detector control  
data transfer and format
