[illegible]

The ADC histogram displays two distinct peaks. The first peak is centered at approximately 350 ADC values, and the second peak is centered at approximately 700 ADC values. The x-axis is labeled 'ADC value' and ranges from 200 to 1000.

The ADC histogram displays two sharp vertical peaks. The first peak is located at approximately 350 ADC units, and the second peak is at approximately 700 ADC units. The x-axis is labeled 'ADC value' and ranges from 200 to 1000.

[illegible]

The histogram displays the distribution of ADC values for two samples. The x-axis, labeled 'ADC value', spans from 0 to 1000 with major ticks every 200 units. The y-axis represents frequency, ranging from 0 to 50,000 with major ticks every 10,000 units. Two prominent, narrow vertical bars indicate the primary data concentrations: one at approximately 360 ADC units reaching a height of about 50,000, and another at approximately 700 ADC units also reaching a height of about 50,000. The baseline between these peaks is flat, indicating minimal data in those regions.
