

SALTRO16 Bonding Information

The die thickness is 255 micrometers

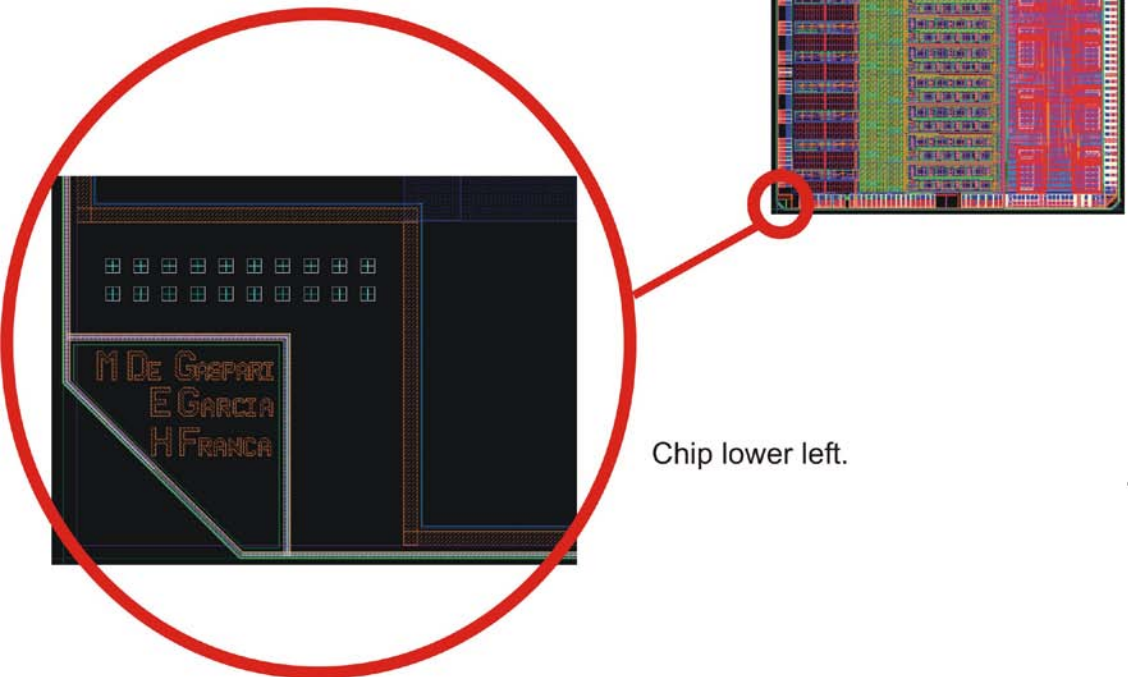

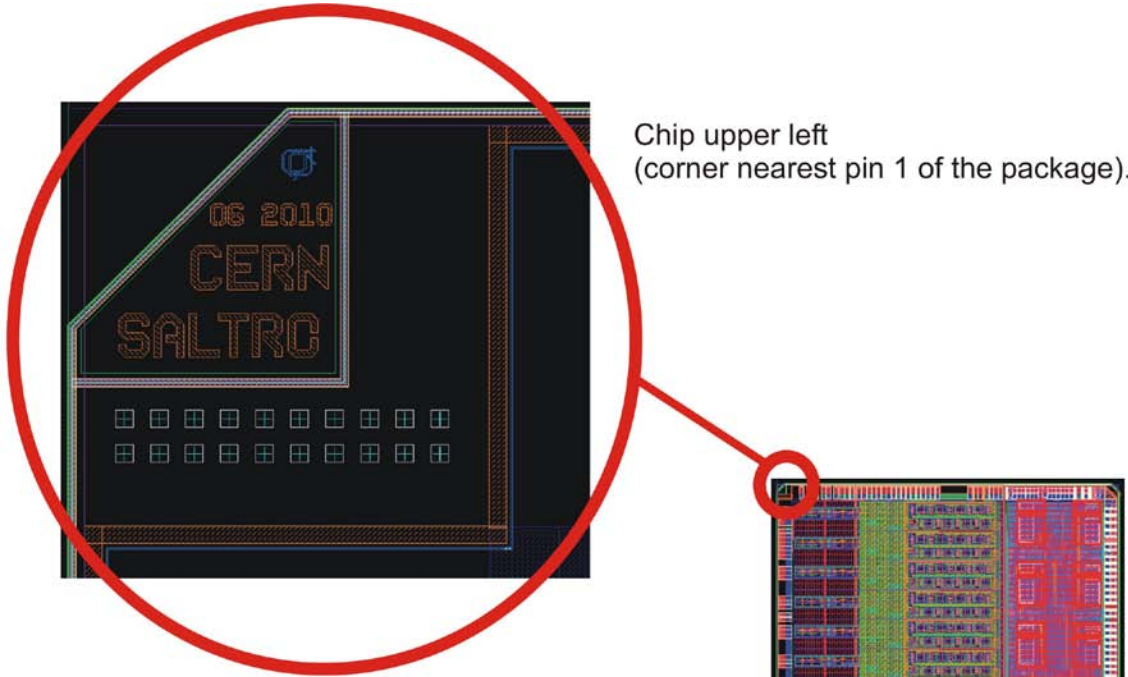

Chip Layout:

The indicated sizes refer to the sizes of the CHIPEDGE layer.

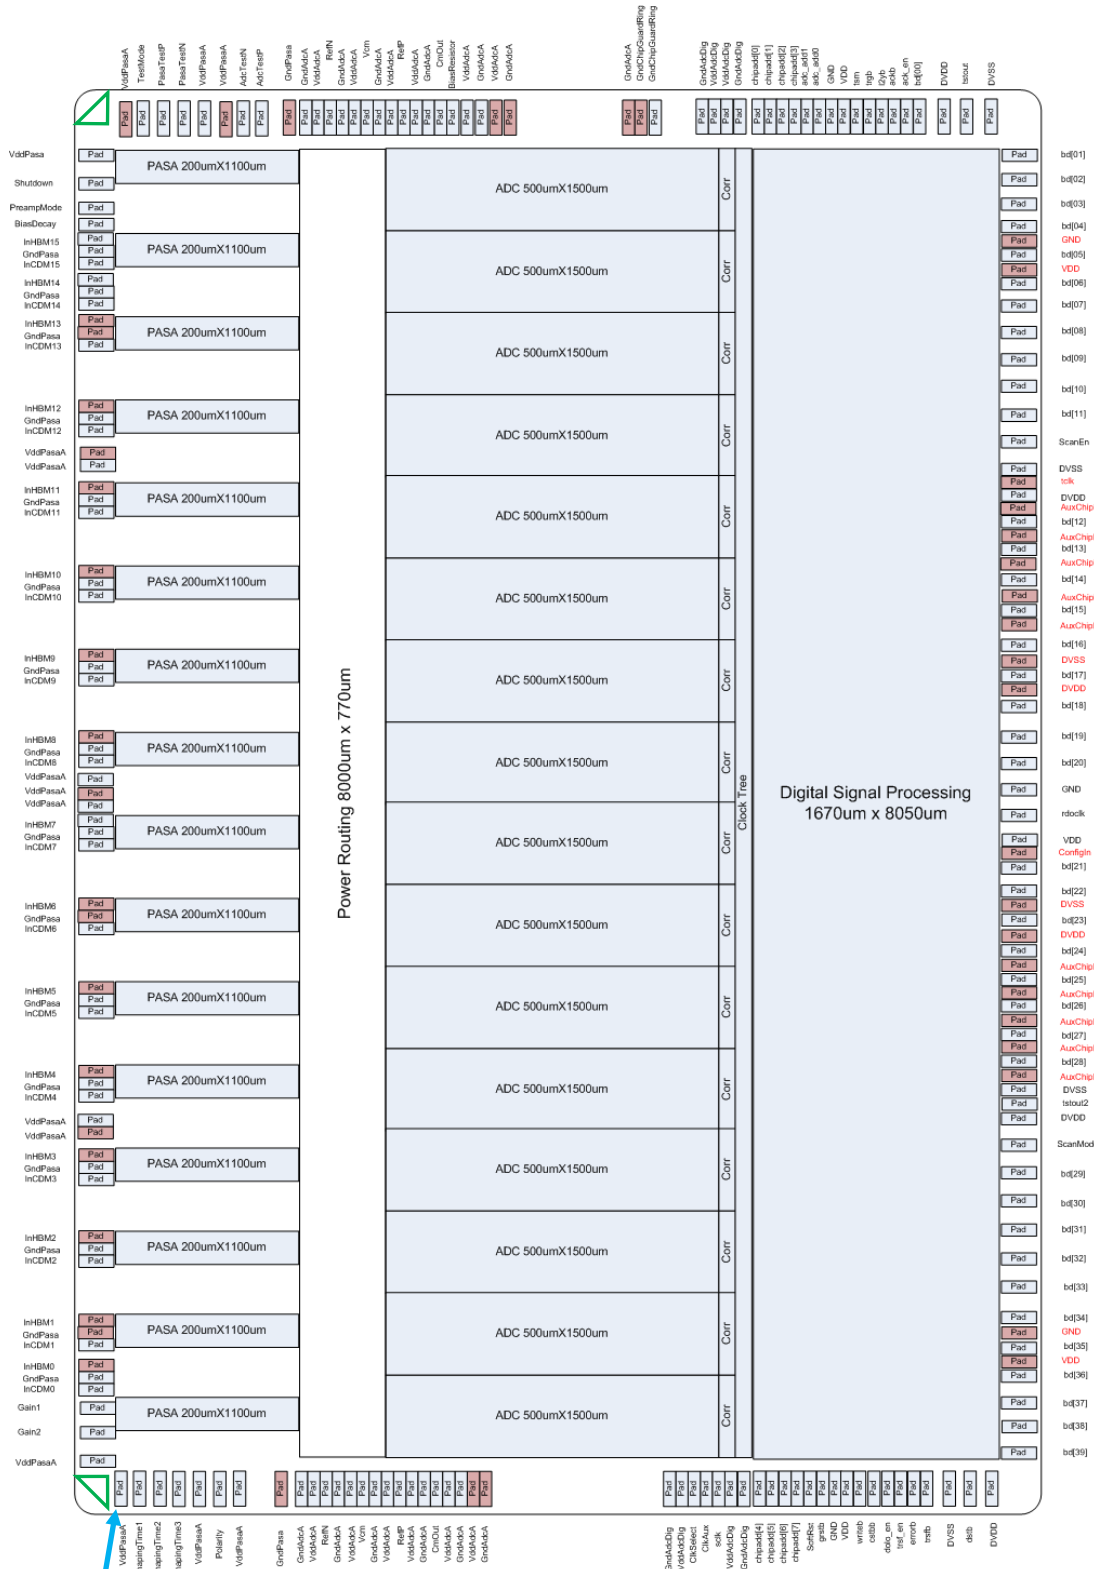

The Logo positions.

The chip has two logos. Both logos are located on the left side of the chip as shown below. The upper left logo is to be located nearest pin 1 of the package.

Pad names and location:

Pads in brown are left unbound (NC).

Pad on silicon #1

A total of 229 pads are located on the die; only 180 are bonded.

The table below shows the bonding connections required between the Pads on the silicon and the pins on the package. The origin for the coordinates is the center of the leftmost pad in the lower row of pads, units are um.

Pin # on Package	Pin # on Silicon	Pin Name	CenterX	CenterY

The size of the opening of each pad is 95.03um x 62.00um.
The minimum pad pitch is 73um.

Total # signal IOs: 115.
Total # power pins: 65.
